

Broadband Services

OPPORTUNITY

Using an advantageous network cost structure with a rapidly deployable platform, Eezinet will capture opportunities overlooked and ignored by other carriers.

Deploy state-of-the-art cost-saving fiber optics combined with 4G distributive cellular technology.

Utilize non-traditional antenna sites along with co-location on existing sites.

DATA SERVICES

Provide retail wireless services in our niche markets through wireless dealers, company retail outlets, and our relationship with wireless products distributors through major retailers.

Offer high speed wireless broadband internet services to areas unreachable by DSL or CATV in rural parts of the Eezinet service area.

Supply IP Multimedia Subsystem (IMS) fixed/mobile convergence technology which will provide Eezinet subscribers with a host of rich multimedia services with global

- Focus on underserved market segments ignored by other service providers.

- Meeting the broadband need of small and medium size markets represent significant potential for new customers for voice, video, and data.

- Deploy wireless access for voice, data and video services on planned network.

- Develop relationships with communities that need communications facilities for economic development and homeland security initiatives.

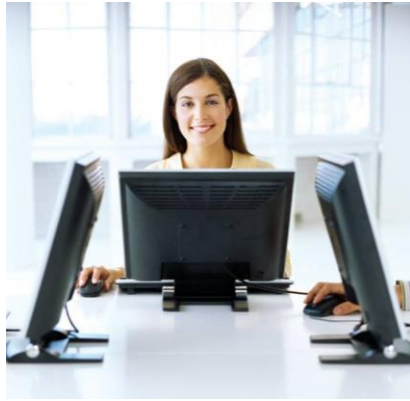

The Eezinet Corporation is a broadband wireless/data network solution company. Developing technology to deploy networks for broadband wireless and fiber optics communications over the Internet from the beginning to the end.

Our wireless broadband platforms bridge the last mile. A point-to-multipoint solution that replaces the local loop for rural corporate clients, small businesses, educational institutions and other organizations.

The Eezinet Corporation is committed to bringing the Internet to un-served and underserved communities by placing broadband connectivity in local rural communities. Understanding that many rural communities do not have local connectivity, Eezinet's strategy is to establish sufficient connectivity points throughout these communities.

We are also committed to developing "Long-Term Partnerships" with the various organizations within rural communities. These partnerships can generate potential tax revenue and provide a positive employment resource allowing for future growth. Working together, the development of rural communities will become a reality.

Service Features and Benefits

Our systems allow first class, high-capacity, point-to-point wireless transmission across terrain impediments, for customers who want to bypass wired networks or have no wired options.

Our solutions are ideal for the following:

- Government Entities
- Corporate Sites, particularly with extended campuses
- Enterprise Application Deployment
- Healthcare Organizations requiring secure, HIPAA-compliant wireless
- Transmission and storage of private data
- Libraries, Schools, and Universities
- Towns and Cities, rural or urban
- Systems Integrators
- CLECs
- ISPs

TECHNICAL SUPPORT

- ✓ 24/7 -Network support access.
- ✓ Local presence and real-time response.
- ✓ Data/Network security.

TURNKEY SOLUTIONS

Implementation, maintenance and support for wireless access for voice-data-video services on a planned network.

LOCATIONS

To fulfill our commitment to service, quality and support. Eezinet has sales and support service members in your community, and across the United States, as well as regional partners and distributors

For more information on any of our services please visit us on the Web at: www.eezinet.com

- ✓ No cumbersome cable connections and much less use of T1 and no need for fixed land lines.
- ✓ Much faster than cellular 3G and comparable to ADSL and cable modem speeds.
- ✓ Freedom, mobility and unlimited download and upload speed.
- ✓ More cost effective, contract flexibility, and quality customer service.
- ✓ No additional hardware required.
- ✓ Eezinet can access rural areas where landline infrastructure is not available and where cellular operators do not provide efficient service.

Business Shortcomings

- Cellular broadband (3G) and fixed broadband service speeds are extremely slow and limited.
- Services are quite expensive in the area, for both cellular and fixed broadband.
- Most service providers have cap limitations on internet data plans.
- Client service needs are usually met with slow and untimely provider responses.
- Rural communities have a need to have greater local provider presence and accessibility.
